

It's more than just a birthmark.

Sturge-Weber Syndrome is a rare disease characterized by a port-wine birthmark, but that's not all. It can cause neurological and opthomalogical conditions as well, which can lead to blindness and even death.

Out of 3,000 infants born with a port-wine birthmark, 8% are diagnosed with Sturge-Weber Syndrome.

There isn't a cure yet.

For 30 years, the Sturge-Weber Foundation has led the cause for change by raising awareness and investing in research.

It's not just a birthmark, it's a life worth changing.
Your change can help make that change.
